

WHOM IT MAY CONCERN

I am pleased to strongly recommend Ms. Thais A. Molina, a student in the Software Engineering and Artificial Intelligence and Robotics programs at our university.

From the outset of her academic journey, Thais has demonstrated exceptional commitment, maturity, and professional projection that distinguish her among her peers. She was selected by the program directorate to join a select group of outstanding students based on her academic profile and potential, reflecting the institutional recognition of her performance.

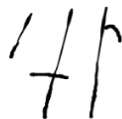

Notably, upon the emergence of the Artificial Intelligence and Robotics program at our institution, Thais did not hesitate to enroll immediately, pursuing both degrees in parallel. This highlights her strategic vision and passion for innovation in emerging fields.

Among her academic achievements, she stands out for having promoted all her courses, avoiding final exams by never failing any regular exam or practical assignment, which evidences her excellence and consistency.

Furthermore, she chose to enroll in three or four courses each summer instead of taking vacations, an unusual behavior that underscores her unwavering discipline, determination, and focus on long-term goals. These qualities position her as an ideal professional for dynamic work environments, capable of handling intense workloads with resilience and sustained productivity. Her strengths include proactive initiative, autonomous learning, and participation in personal projects in AI, data science, and programming, as well as in international open-source communities, confirming her motivation to innovate and contribute.

I am convinced that Thais possesses extraordinary potential for international programs or high-level professional roles, representing an invaluable asset to any team.

Sincerely, Dr. Luis Bravo Director of Engineering and Computer Science Programs Siglo XXI University
